

K-6 Teachers

LET'S GET PHYSICAL - with MATH!

Number Sense

Patterning

Measurement

Geometry

Data Management

Mapping

Language

HOW? It's "BACK TO SQUARE ONE" (with 101 ways to use a large 100 square floor grid)

This workshop is a highly interactive session that will introduce educators to the innumerable and creative ways of teaching math, mapping and language concepts using a large 100 square floor grid.

We all "LEARN BY DOING" and through active involvement and physical exploration of abstract concepts, children can gain a better understanding of them. Teachers will leave with strategies for immediate classroom implementation in the math strands of Number Sense, Patterning, Measurement, Geometry, and Data Management.

Fun filled games will also be played to learn skills in mapping and language.

Come with a camera and good shoes and be prepared to "play the day away"!
